

Texas Technology Access Program

The mission: increase access for people with disabilities and those who are aging to Assistive Technology (AT) tools and services.

- The Texas Technology Access Program (TTAP) supports a statewide network of assistive technology demonstration centers to provide general assistive technology, computer access, and portable computer access demonstrations.
- Demonstrations are available to consumers and their family members, the professionals that support them, as well as advocates, employers, and educators.
- Demonstrations include an explanation of the function of a device and instruction in its use. There are opportunities at each in-person demonstration event for participants to use or try a number of devices so that each individual will be better able to determine the most appropriate device to meet their specific needs.
- Consumers may also choose to borrow assistive technology seen at a demonstration center from the TTAP Loan Library.
